

# ESSENTIAL VISIBILITY

Complete visibility into every device, every site, across your enterprise

SecuriThings Essential Visibility provides organizations with a centralized, real-time view of their entire physical security infrastructure—empowering teams with the insights needed to make faster decisions, reduce risk, and maintain full control over connected devices.

## Gain Complete Visibility into Your Connected Environment

Enterprise environments include thousands of devices across multiple systems, vendors, and locations. Without centralized visibility, organizations face blind spots that lead to operational inefficiencies, compliance gaps, and increased cyber risk.

### Full device inventory and insight

Gain a complete, up-to-date inventory of all connected devices, including location, status, and detailed attributes—eliminating blind spots across your infrastructure.

### Faster, data-driven decision making

Access critical operational and security data instantly to support faster, more informed decisions across teams.

### Reduced risk and security gaps

Identify outdated firmware, misconfigurations, and vulnerabilities early—before they lead to incidents or downtime.

### Improved compliance visibility

Track compliance status across all devices with centralized monitoring and detailed reporting

### Optimized device lifecycle management

Understand device health, support status, and lifecycle stage to plan maintenance and replacements more effectively.

# Consolidate, automate & secure your complete device fleets

**SecuriThings Platform** provides real-time security and operational efficiency to improve system availability, organizational compliance, and cyber protection while reducing costs and streamlining future planning.

## Centralized asset management

Monitor all devices in a single platform with detailed information including geolocation, configuration, and compliance status—ensuring full visibility and control.

## Built-in integrations for instant visibility

Leverage a broad ecosystem of supported devices and systems to achieve seamless, real-time visibility across heterogeneous environments.

## Vulnerability & risk visibility

Identify outdated firmware, unpatched systems, and misconfigurations to surface risks and support proactive remediation.

## Lifecycle & maintenance visibility

Track end-of-life (EOL) and end-of-support (EOS) status for each device—enabling proactive maintenance planning and cost optimization.

## Comprehensive reporting & analytics

Generate reports on device status, compliance, and operational issues with flexible templates—simplifying documentation and stakeholder communication.

## Deployed across many industries including:

- + Technology companies
- + Financial institutions
- + Healthcare
- + Manufacturing
- + Education
- + Oil and energy
- + Pharmaceutical
- + Logistics
- + Transportation
- + Sports & Venues
- + Entertainment
- + Retail
