

OPERATIONAL MANAGEMENT

Maximize uptime, reduce
downtime, and take full control
of your devices

SecuriThings Operational Management enables organizations to proactively manage and remediate issues across their physical security and supporting infrastructure—ensuring maximum system availability, reduced operational costs, and improved reliability at scale.

Take Control of Your Device Operations—at Scale

SecuriThings Operational Management delivers a centralized platform to monitor, diagnose, and resolve device issues in real time—empowering teams to shift from reactive troubleshooting to proactive operations.

Improved system availability

Continuously monitor device health, performance, and connectivity to prevent outages and ensure uninterrupted operations.

Reduced downtime and faster resolution

Quickly detect and resolve issues with real-time alerts and root-cause diagnostics—minimizing Mean-Time-To-Resolution (MTTR).

Significant cost savings

Eliminate manual troubleshooting and unnecessary site visits through centralized visibility and remote remediation capabilities.

Improved operational efficiency

Automate monitoring, alerting, and reporting workflows—enabling teams to focus on higher-value tasks instead of repetitive manual processes.

Enhanced reliability across infrastructure

Maintain consistent performance across devices, systems, and sites with proactive monitoring and issue prevention.

Consolidate, automate & secure your physical security devices

SecuriThings Platform provides real-time security and operational efficiency to improve system availability, organizational compliance, and cyber protection while reducing costs and streamlining future planning.

Real-time availability monitoring

Get real-time data on the operational health of devices, infrastructure components, management systems, sites, and more.

Compliance reporting & visualization

Generate automated compliance reports, including device life cycle report, vulnerabilities report, geo location view, and more.

Root-cause analysis & diagnostics

Quickly identify the exact source of issues with detailed diagnostics, enabling faster and more accurate remediation.

Rapid remediation workflows

Resolve device and system issues directly from the platform—reducing downtime and improving operational resilience.

Smart alerts & analytics

Receive real-time device issue detection including policy violations, unstable devices, recording issues, root cause analysis and suggested resolutions.

Enterprise-wide collaboration

Integrate with a broad range of IT platforms, including service management platforms, ticketing management and more.

Deployed across many industries including:

- + Technology companies
- + Financial institutions
- + Healthcare
- + Manufacturing
- + Education
- + Oil and energy
- + Pharmaceutical
- + Logistics
- + Transportation
- + Sports & Venues
- + Entertainment
- + Retail
